

standard;

b) a second communication interface, which conforms to a second communication standard different from the first communication standard; and

c) a control unit, which sets said second communication interface in a passive state if said first communication interface is set in an active state, and sets said first communication interface in a passive state if said second communication interface is set in an active state.

32. (Thrice Amended) An apparatus according to claim 28, wherein the first communication standard is an IEEE 1394 standard.

33. (Thrice Amended) An apparatus according to claim 28, wherein said imaging apparatus is a video camera.

34. (Thrice Amended) An apparatus according to claim 28, wherein the second communication standard is one of a RS-232C standard, a RS-422 standard, and a USB standard.

35. (Thrice Amended) An apparatus according to claim 32, wherein the second communication standard is one of a RS-232C standard, a RS-422 standard, and a USB standard.

42. (Thrice Amended) A method of controlling an imaging apparatus that includes a first communication interface, which conforms to a first communication standard, and

setting the first communication interface in a passive state if the second
